

Internal link checking

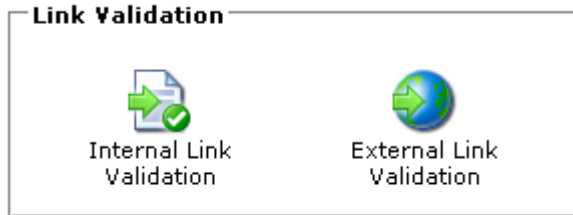

1. Switch to administration view

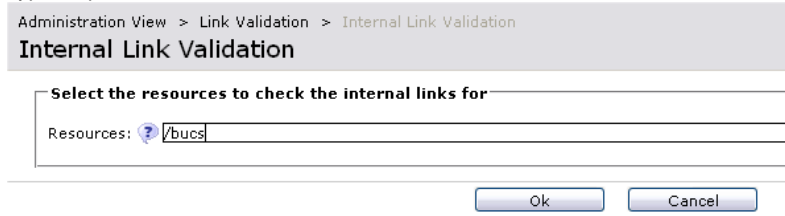

2. Select Link validation

3. Select internal link validation

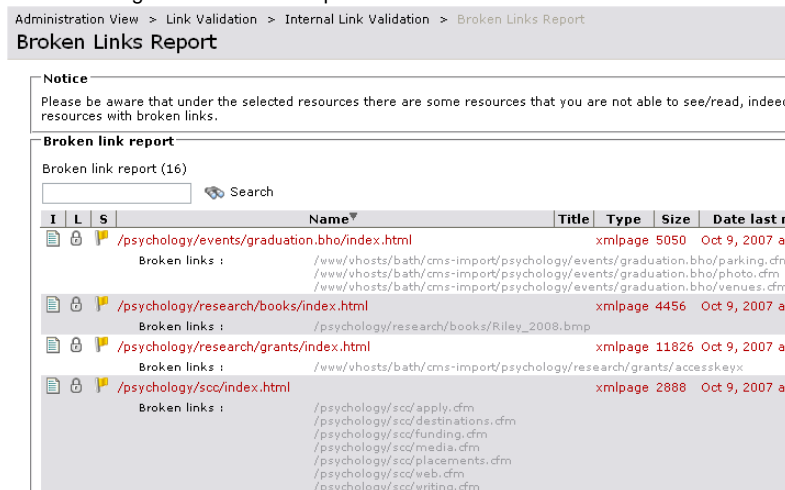

4. Type /deptname into the field, as shown:

Click OK.

5. You will then get a broken links report:

You can click on the red links to open and edit the pages that need fixing. The grey URIs are the links that are broken.

NB - this task is easier if you have access to the Source, and so it is probably better if only maintainers who know HTML carry it out.

Unable to render (include) The included page could not be found.
