

Import from JSPWiki to Confluence

We have a tool for importing old JSPWiki installs to Confluence.

We maintain our own copy of this (i.e. the full source) rather than just the binary, because it's regularly broken in the owner's svn repo.

1. Check out from <https://vcs.bath.ac.uk/svn/confluence/trunk/wikiimporter>
2. For the JSPWiki you want to import, copy the `jspwiki.properties` file, page file directory and attachments directory to your local machine.
3. Change the `jspwiki.fileSystemProvider.pageDir` and `jspwiki.basicAttachmentProvider.storageDir` fields in the now-local `jspwiki.properties` file to point to your local versions
4. JSPWiki comes bundled with about 80 pages of JSPWiki related information which suddenly become redundant, so delete those
5. Go to the command prompt and navigate to the directory containing `wiki-importer-1.4.4.jar`
6. Import the JSPWiki using the following command:

```
java -jar wiki-importer-1.4.4.jar jspwiki JSPWIKI.PROPERTIES_LOCATION  
NEW_SPACE_NAME SPACE_OWNER_USERNAME
```

i.e. when importing the bucswebdev wiki Phil put the `jspwiki.properties` file in the same dir as the jar file and typed:

```
java -jar wiki-importer-1.4.4.jar jspwiki jspwiki.properties bucswebdev  
pgw22
```

(the importer actually also imports Twiki syntax, hence the initial `jspwiki`)

- The instructions above creates backup file which needs to be imported into confluence. The backup file can be found in the exports directory.
- Use the backup/restore page inside the confluence administration interface to import the converted wiki
