

Getting started with Grunt

Don't know how to use [Grunt](#)? Find out here!

Step-by-step guide

Install grunt

```
$ sudo npm install -g grunt-cli
```

Initialise package.json

```
$ npm init
```

Install grunt task runner

```
$ npm install grunt --save-dev
```

Create a Gruntfile.js containing this

Gruntfile.js

```
module.exports = function(grunt) {  
  grunt.initConfig({  
  
    });  
}
```

Install load-grunt-tasks

```
$ npm install load-grunt-tasks --save-dev
```

Add the config to Gruntfile.js

load-grunt-tasks

```
module.exports = function(grunt) {  
  require('load-grunt-tasks')(grunt);  
  grunt.initConfig({  
    ...  
  });  
}
```

You are now good to go, adding plugins for the tasks you might need! Here are two to start you off:

1. [grunt-contrib-sass](#)
2. [grunt-contrib-uglify](#)
