

Re:View lecture capture (Panopto)

What is Panopto?

The Audio Visual department manages the **Re:View** lecture capture platform. Content that has been recorded using this can be viewed at the website <https://uniofbath.cloud.panopto.eu>

Re:View allows recordings to be made in **three ways**:

1. Equipment has been **installed in selected lecture theatres** to allow recordings to be made automatically. The user books a recording to be scheduled with the AV Bookings desk and the recording of the lecture happens automatically and unobtrusively to the presenter.
2. Using the **Panopto Recorder**, you can record your presentation using off the shelf microphones, cameras or webcams connected to the PC.
3. Downloading the **Panopto iOS App** from the App Store, enabling you to record and view captures using your iPhone, iPod Touch or iPad.

The recordings can be viewed in a number of ways, via the website, via an audio or video podcast, or downloaded and put on a data CD or DVD to be viewed offline.

Good Practice

- [What is Lecture Capture?](#)
- [Introducing Panopto](#) is a four page guide which outlines the process that colleagues should follow when thinking about capturing lecture content.
- [5 Reasons To Capture Your Practice](#) gives sound evidence-based advice on lecture capture.
- [Presenting for Lecture Capture](#) includes some useful these steps to ensure that your captured lecture is recorded as well as possible.

Panopto Tutorials

Recording

It is vital that you ensure you have permission to capture any lecture that you wish to have recorded. This is important as any recording of lecture content is subject to copyright and other intellectual property rights.

You need to ensure that you have permission of the participants of the lecture and that any content you include in the recording is cleared for copyright.

In teaching rooms

- Scheduling lectures to be recorded in teaching rooms
- Preparing your Moodle course for Re:View (Panopto)
- Rooms enabled for lecture capture

On your desktop PC

- Using the Panopto Recorder on your desktop PC/Mac

On your Apple iOS device (includes the iPhone, iPod Touch and iPad)

- iOS App overview and help

Working with recordings

Getting Started

- Logging onto the Panopto Server
- Viewing Panopto content
- Hiding/unhiding sessions from students

Editing Recordings

- Basic Editing
- Advanced Editor Usage
- Splicing and Remixing

Further **Tutorials** are available on the Panopto Support website, including:

- Video Management
- Merging and copying recordings
- Viewing folder statistics
- Change Session Name and Folder
- Embedding a session (into Moodle)

A number of additional **FAQs** and support materials are also available from A.V

Further details can also be found on the [Audio Visual website](#).
