

# Firefox Extensions

## Essential extensions

- [Web developer toolbar](#)
- DOM Inspector (installed with Firefox when you click "custom install")
- [FireBug](#)
- [Live HTTP Headers](#)
- [IEView](#)

## Useful

- [Adblock Plus](#)
- [Add Bookmark Here](#)
- [Colorzilla](#) - Advanced Eyedropper, ColorPicker, Page Zoomer and other colorful goodies.
- [Greasemonkey](#)
- [HTML Codesniffer](#) - for checking accessibility of an HTML document.
- [MeasureIt](#) - Draw out a ruler to get the pixel width and height of any elements on a webpage.
- [Nuke Anything](#) - Remove any object from the page.
- [Pearl Crescent Page Saver](#) - lets you save an image of a web page to a file in PNG format
- [QuickJava](#) - Allows quick enable and disable of Java and Javascript from statusbar.
  - (can also be done from the web dev toolbar)
- [Reveal](#) (good example use of `<canvas>`)
- [Tab Mix Plus](#)
- [Venkman Javascript Debugger](#) - Lets you step through javascript as it runs, very useful.
- [Web Development section of Extensions site](#)
- [Zotero](#) - reference manager tool (very very cool) - to help you collect, manage, and cite your research sources

## Other

not an extension, just a tech demo, but a first-person shooter demo just using JS and the `<canvas>` tag: <http://www.abrahamjoffe.com.au/ben/canvascape/>
