Projects

About this page

This page acts as an index of project-level research data management documentation for research carried out within the Department.

Instructions

Once a project has been funded, it should appear on the list below. To add a project to this list:

1. Create a sub-page of this page. You can do this by selecting Add > Page at the top right of this page.
2. Give the project name as the page title.
3. In the body of the page, give the following information
   - Principal investigator
   - Location of project data on X drive
   - Location of Data Management Plan
   - Brief description of the project
   - Any other relevant links, e.g. project web site or blog

The Data Management Plan can be written using the DMP Online tool, using a template specifically written for the Department. Once exported from that tool, if the plan does not contain any sensitive information it should be attached to the above project page; otherwise it should be stored in a protected area (e.g. a private project wiki or on the X drive) and a link to it provided on the above project page.
